Suite 2 Burlington House, St Saviours Road, St Helier, Jersey JE2 4LA

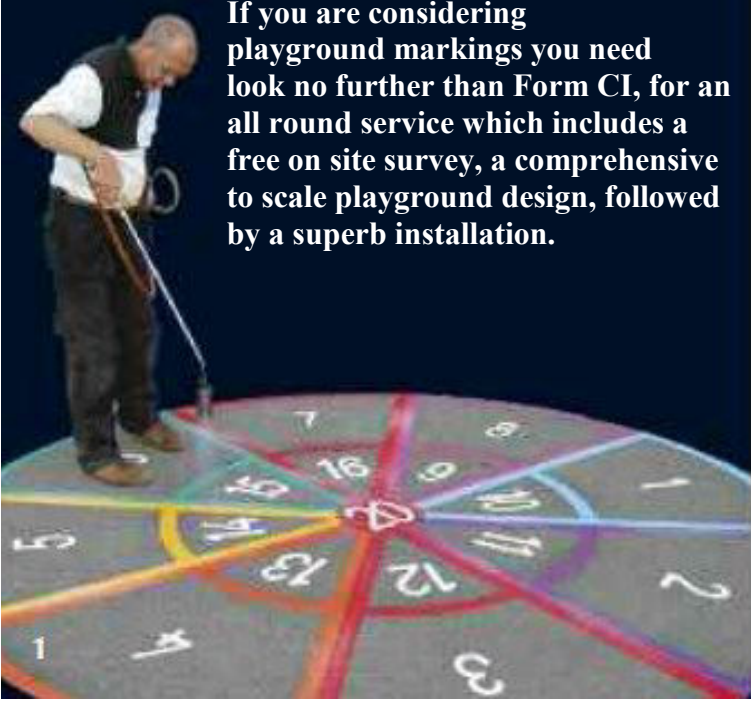

Our products are manufactured from high quality thermoplastic, a material that looks fantastic in the playground due to the bright, vibrant colours and unique designs.

Our experience tells us that individual schools have very different individual requirements, as a consequence our skills, combined with the flexibility of the thermoplastic material means we are able to create bespoke designs to any specification on any tarmac surface.

Guarantees and Price Promise

Our research tells us that our prices are competitive in the market place. we will endeavour to match any like for like quotation without compromising the quality of service or product. There aren't many suppliers of these types of markings within the Chanel islands many because we are the soul channel islands agents and distributor for Thermapply products.

If you are considering playground markings you need look no further than Form CI, for an all round service which includes a free on site survey, a comprehensive to scale playground design, followed by a superb installation.

The Material

Originally designed for use on the highways and now adapted for use within play and recreational areas, durability is the key property of this material. Manufactured from a combination of granulated plastic and glass bead, the material is non-toxic, non-slip, colour fast and extremely durable. The material complies with

The Application Process

The material is applied to the tarmac surface using a propane burner.

heated until molten, the material becomes one with the bitumen in the tarmac, and once cool (within approximately 10 minutes of application) the markings are immediately ready for use by the children, unlike paint or other forms of marking which usually require hours to dry, rendering play and recreational areas redundant for long periods of time.

Our Aims

Our aim is to help you stimulate playground activity for your pupils by providing a wide range of playground games and markings which include: Snakes and Ladders, a-z dragons, numbered Snakes, hopscotch, netball/football Courts and much more... all of which bring tremendous colour and brightness to a normally grey and dull surface

Our Service

As with any capital investment, which our markings are, head Teachers and their staff need to be satisfied their playground surfaces are suitable, and that any markings being considered will fit within the specified areas. To this end we offer a free no obligation site survey giving advice and recommendations to ensure you maximise your budgets.

The Installations Procedures

In normal circumstances we are able to supply your Markings within two weeks of receiving your order, however there are times when this is not possible. The most usual cause for delay is the weather. Thermoplastic markings cannot be applied to wet surfaces. due to the complexity and time taken to lay out some markings such as netball courts, 1-100 grids, multi grids etc prior to committing them permanently to the tarmac surface, even the threat of rain will result in an order being postponed. All we would ask is please be patient because a correctly installed job will give years of fun, whereas an incorrectly installed job will cause Inevitable long term problems.

We trust that you find this brochure helpful when Choosing your playground markings, however if you do not see what it is you require, please call the office; someone will always be there to assist.

We look forward to hearing from you and hope to be of service to your school in the future.

TRADITIONAL PLAYGROUND GAMES

HOPSCOTCH

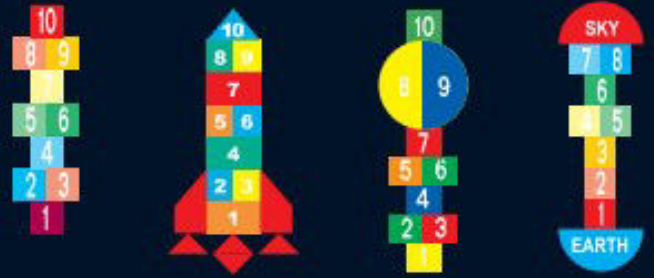

There are apocryphal stories of hopscotch being invented by the Romans or the Chinese, but the first recorded reference to hopscotch dates back to 1677. In an entry of Poor Robin's Almanack for that year, the game is referred to as "Scotch-hoppers."

Since the game was known and popular in the seventeenth century, it is logical to assume that it existed at least a few decades (or perhaps even many centuries) before 1677. But no conclusive evidence has yet been

MAKING THE MOST OF THE SPACE AVAILABLE

Some schools are luckier than others when it comes to playground space. Quite often markings are put into play areas without any real consideration for the children who will use them. We adopt the view that the playground should be an extension of the classroom; orderly, well laid out, colourful and most important of all, should make correct use of the space available so that the children are not on top of each other whilst at play. The key is the way in which the playground is structured. All the individual markings have their own sufficient space so as to allow the children room to learn and play. We apply this philosophy to all playground designs, big or small, and to this end we provide accurate drawings along with our quotations, to illustrate exactly where your proposed markings will be featured within your play areas.

THEMED PLAYGROUNDS

As a company we pride ourselves on being able to design and create any type of playground markings and we actively encourage the children to come up with their own designs, after all the playground is their domain.

At White bridge Infants School in Essex, the children all took part in a Space themed art competition and the winning designs were recreated in thermoplastic from the children's original artwork.

If your school is looking to have new playground markings, why not get the children involved.

We will happily come and visit your school, sit down with the council and discuss their ideas. Our design and quotation service is completely free and will allow your school to have a totally unique playground at a very competitive price.

This is why we do what we do!

....and we do it well.
